Arctic Live Dive
Where are we diving?

Cambridge Bay, Nunavut, Canada

The dive will take place in Cambridge Bay on Victoria Island.
Cambridge Bay is a hamlet of 1,700 people and the last stop for ships going through the Northwest Passage.
Inuit people have lived here for thousands of years.
The Inuit are uniquely adapted to their environment. The land and its wildlife are as fundamental to Inuit beliefs and culture as they are to their very existence.
An abundance of marine resources were traditionally harvested in this area and remain important food sources:

- **Fish** - Arctic char, lake trout
- **Caribou, Muskox**
- **Ringed seal**
The **underwater terrain** is quite varied. Mud, sand, rock and gravel create many **habitats**.
Water temperature varies throughout the year. On average it stays below 0°C, but can go up to 10°C!
We will explore various animals during our lesson plans, here's a sneak peek... What lives there?
I can’t remember!

What was that?

I can’t remember!

Divers need to be skilled at observation.

Can you make a list of the species you saw on the previous slide?

What else do you expect to see during your Live Dive?
How are we getting there?
